

CLAIMS

1. A roof flashing strip comprising:
an elongated member having a backing plate and a plurality of substantially parallel legs projecting laterally outwardly therefrom,
the legs being inclined with respect to a horizontal plane at an angle θ of at least one degree.
2. The roof flashing strip of claim 1 wherein the angle θ ranges from about one degree to about five degrees.
3. The roof flashing strip of claim 1 wherein each of the laterally outwardly projecting legs has a portion thereof overlying an adjacent leg.
4. The roof flashing strip of claim 1 wherein at least some of the plurality of legs have a first portion overlying an adjacent one of the legs and an opposite second portion underlying an adjacent one of the legs.
5. The roof flashing strip of claim 4 wherein a gap is defined between the overlying portions of the legs.
6. A method of manufacturing a roof flashing strip which comprises:
extruding the roof flashing strip of claim 5.
7. The method of claim 6 wherein the roof flashing strip is formed from a plastic material or a metal material.
8. The method of claim 6 wherein the roof flashing strip is formed from a plastic material selected from a group consisting of polyvinylchloride, high density polyethylene, polyurethane, and polyvinylacetate.

9. The method of claim 6 wherein the roof flashing strip is formed from aluminum.

10. A method for manufacturing a roof flashing strip which comprises:
injection molding a suitable plastic material into a flashing strip,
the flashing strip comprising the strip of claim 5.

11. The method of claim 10 wherein the plastic material is selected from the group consisting of polyvinylchloride, high density polyethylene, polyvinylacetate and polyurethane.
